

Match the seed to its method of travel.

A. Oak Tree

“I am disguised inside nutritious fruit. Animals eat the fruit and carry me to a new location where I am dropped to the soil in the animal dung.”

B. Maple Tree

“An animal may bury me to save to eat later. If the animal does not come back to get me, I will sprout and grow where the animal planted me.”

C. Strawberry

“When I float through the air I spin like the rotor of a helicopter. I hope I will fall in water that moves me away from my tree or land in a place that I have space to grow.”

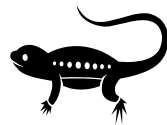

D. Dandelion

“I have small parachutes that can float on the wind. When furry animals touch my plant I may stick to their fur and be brushed off later far from my parent plant.”

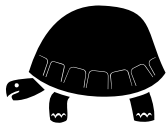

Draw lines to match the animals to their physical adaptations.

I have a shell for protection and 4 legs

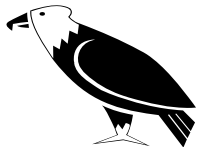

I have a scaly covering but no legs

I have a shell for protection but no legs

I have wings and fur

I have feathers and webbed feet

I have scales and fins

I have a feathers, wings and claws

I have a scaly covering and legs
