HORTICULTURE HIGHLIGHTS

Horticultural Highlights - January 2023

'Rijnveld's Early Sensation' Daffodil – Border Garden

Like clockwork, this wonderful daffodil is always the first to boom, and always in January. It was first bred sometime before 1943 in England by Mr. F. Herbert Chapman. Perhaps Mr. Chapman was slow to register his prize, because a Dutch company claimed it was theirs, putting their own name on it in 1956. Who knew the world of daffodils was full of such intrigue?

Wintersweet – The Winter Garden

The flowers of wintersweet (*Chimonanthus praecox*) are somewhat bell shaped and hang from the bare branches, usually with the first warm spell of winter. Their fragrance is sweet like the best perfume.

Hybrid Hellebores – The Winter Garden

Within the past few decades plant breeders have been busy with different *Helleborus* species, crossing them back and forth, looking for something new and different. In our Winter Garden you can see some of the results of this effort with varieties that are reliably evergreen, sterile (will not seed around), bloom earlier, and with upright flowers on sturdy stems you can actually see without having to get down on your knees. Look for 'Cinnamon Snow', 'Mahogany Snow', and 'Joseph Lempler', all of which will be blooming this month.

Bearsfoot Hellebore – Border Garden, Infinity Garden

This plant (*Helleborus foetidus*) also goes by the name of dungwort, reeking hellebore, stinking hellebore, and in fact, *foetidus* means smelly. However, you have to crush the stems and foliage to get the aroma, otherwise it is perfectly respectable. It has quite an unusual flower with celadon green petals edged in burgundy, and the evergreen foliage is handsome as well.

Winterberry Holly – Holly Garden, Discovery Grove

Many hollies are known for their evergreen prickly foliage, but not our native winterberry (*Ilex verticillata*). In the fall the foliage turns a golden yellow before dropping, though the branches are not bare. They are covered in clusters of bright red, showy fruit which usually persists into January when overwintering birds will make a meal of them.

Coral Bark Japanese Maple – Le Jardin

While most Japanese maples are noted for their spring and fall foliage, this one (*Acer palmatum* 'Sango-kaku') is noted for its handsome coral-red stems which become particularly colorful in cold weather. You should see them covered in snow – what a photo op!

Orchids – Tropical Display House

The weather may be cold outside, but it is balmy in our Tropical Display House, and that is just how the plants in there like it, including our exotic orchid collection. At this time of year they begin their main bloom season, which usually peaks in March. As winter progresses stop by often to see what might be in bloom.

Colorful Conifers – Conifer Garden, Garden-wide

While we have conifers throughout our 175 acres, the best place to see them is in the Conifer Garden. In the winter the foliage of many conifers intensifies in color and you can see rich silvery blues, dusky purples, and golden yellows.

Winter Jasmine – WOW, Holly Garden

Each winter, this plant (*Jasminum nudiflorum*) graces us with bright yellow blooms on evergreen stems. It is a sprawling haystack of a shrub, not for gardeners who like neat and tidy control, but for those that like carefree abandon, no matter the time of year, it is perfect. Thrives in full sun with neglect.

Laurustinus – Border Garden

Covered in masses of dusky pink buds, laurustinus (*Viburnum tinus* 'Compactum') will soon be covered in clusters of small blush white flowers. This evergreen is one of many notable members of the large *Viburnum* family, and it makes a great alternative to some of the more overused foundation shrubs commonly planted.

Orchids – Tropical Display House

The weather may be cold outside, but it is balmy in our Tropical Display House, and that is just how the plants in there like it, including our exotic orchid collection. At this time of year, they begin their main bloom season, which usually peaks in March. As winter progresses stop by often to see what might be in bloom.

'Christmas Holiday' Heliconia – Tropical Display House

This tropical plant (*Heliconia vaginalis* 'Christmas Holiday') couldn't have a more apt name. It begins blooming in December and will continue into January with its inflorescences of pure red and white, sitting atop dark green foliage.

'Victory' Pyracantha – Border Garden

Dripping with red-orange fruit, the ungainly pyracantha (*Pyracantha koidzumii* 'Victory') can't decide if it wants to be a shrub or a vine. The birds don't care, they just bid their time waiting for the fruit to ever so slightly ferment. Once it crosses that threshold, then an avian feast begins. Not only do they relish the fruit, but pyracantha makes for good shelter being evergreen and thorny, protecting them from both cold winds and predators.

Butterfly Maze – Butterfly Garden

Our butterfly maze is unusual in that its walls are not made from corn, boxwood, or some other plant typically seen in mazes. It is made from 'Northwind' switch grass (*Panicum virgatum* 'Northwind'). This particular variety of native grass was chosen for its very upright habit, its blue-green summer color, and its ease of growth. Right now, the foliage has changed to its winter color of a handsome tawny brown.

'Townhouse' Crapemyrtle – Matson Garden

Most people associate crapemyrtles with summer, but many of them stand out in the winter landscape with their muscular trunks and handsome bark. One of the best at NBG is the 'Townhouse' crapemyrtle (*Lagerstroemia fauriei* 'Townhouse') in the Matson Garden. It also happens to be the Virginia State Champion. Without its leaves you can really appreciate its dark chocolate colored bark. If we happen to get any snow this winter to really bring out that color, be sure to come back with your camera for an Instagram-worthy moment.

Wildlife Watch – NBG is home to several pileated woodpeckers, the largest woodpecker species still living in North America. Now that the leaves have fallen from many trees, these magnificent birds are much easier to spot, though you will likely see them first.
